South Jakarta, Indonesia

Summary

Semester 6 Computer Science student at Binus University specializing in Network Technology, with hands-on experience across networking, cloud infrastructure, and systems integration. Proven ability to translate theory into practice — from configuring DHCP/subnetting for fingerprint devices to provisioning cloud infrastructure on Azure with Terraform and Kubernetes. Fast learner with a strong interest in secure, networked systems.

Education

Binus University | GPA: 3.70/4.00

Bachelor of Science in Computer Science, Specialization in Network Technology

Jakarta, Indonesia

Aug. 2023 — Present

Experience

Full-Stack Engineer Intern

Feb. 2026 – Present

PT Jakarta Infrastruktur Propertindo

Jakarta, Indonesia

- Engineered a full-stack ISP operational website platform (Jaki-Net) using Go and Next.js to centralize customer support ticketing, SLA tracking, and customer billing.
- Architected a dual-layer Casbin RBAC and department-scoped authorization system, utilizing decoupled lookup APIs that reduced sensitive organizational data exposure.
- Refactored database models to enforce strict 1-to-1 relationships, resolving legacy data mapping issues and improving frontend API payload efficiency by over 30%.

IoT & Systems Integration Intern

Jul. 2025 – Aug. 2025

PT LRT Jakarta

Jakarta, Indonesia

- Configured and deployed ZKTeco WDMS fingerprint scanner system for vendor attendance, including device setup, network configuration, and integration with existing infrastructure, reducing time spent on attendance administration and improved operational efficiency.
- Enhanced and digitalized an existing PowerApps application to streamline operational reporting, introducing automated workflows and digital signatures that reduced reporting time by 50% and minimized manual errors.
- Implemented a Microsoft Forms logbook system for 15 employees, enabling direct input and automatic storage, streamlining progress monitoring and improving analytics efficiency for each employee.

Projects

Cloud Infrastructure Deployment on Azure (Terraform, Docker, Kubernetes)

Sep. 2025 – Dec. 2025

- Provisioned a highly-available infrastructure on Microsoft Azure using Terraform (IaC), defining virtual networks, subnets, and an AKS (Azure Kubernetes Service) cluster spanning multiple availability zones.
- Containerized frontend, backend, and database services with Docker, writing optimized Dockerfiles per service to ensure consistent, portable deployments.
- Deployed a 3-tier app (frontend, backend, database) on AKS using Kubernetes manifests, exposing the frontend publicly via LoadBalancer while keeping the backend internal via ClusterIP.

Embedded Fingerprint Attendance System

Jul. 2025 – Aug. 2025

- Configured and deployed ZKTeco WDMS fingerprint scanner system for vendor attendance; integrated with network and existing infrastructure, resulting in real-time attendance tracking and eliminating manual log rolls.
- Automated data capture of check-in/out timestamps for 100+ vendor personnel, which improved reliability of attendance records and reduced time discrepancies.
- Enabled instant generation of attendance reports via automation with Power Automate, and increased accountability by eliminating proxy attendance (“buddy-punching”) through biometric verification.

Campus LAN Network Design & Implementation

Sep. 2024 – Dec. 2024

- Designed & documented a multi-floor star-topology LAN for a university campus, linking individual classroom switches to a centralized core switch and router.
- Configured a hybrid IP addressing scheme: manual static IPs for critical workstations and network gear, plus a DHCP pool serving student PCs, and deployed on-premises DHCP, Apache web, and SMTP/IMAP mail servers.
- Validated network performance and reliability through Packet Tracer simulations and real usage, confirming stable connectivity, minimal packet loss, and consistent low latency across campus.

Publications

- **Perdana, G. A.**, et al. (2025). "CALM: Calibrated Adaptive Learning via Mutual-Ensemble Fusion." Procedia Computer Science, ICCSCI 2025. (Accepted)

Activities

- Freshmen Leader, Binus University** | Jakarta, Indonesia Jul. 2025 – Sep. 2025
- Led and mentored 50+ freshmen through Welcoming Week activities at Binus University.
 - Coordinated orientation schedules and group activities, ensuring smooth transitions for new students through campus tours, ice-breaker sessions, and mentor pairing.
 - Advised and supported freshmen during their adjustment week, answering queries about campus culture, study strategies, and available academic/social resources.
- Chairperson of Logistics Coordinator & HRD, Dunia (NGO)** | Jakarta, Indonesia May. 2024 – Present
- Recruited and managed 60+ volunteers; streamlined onboarding with SOPs, reducing setup overhead by 25%.
 - Optimized procurement strategy by conducting pre-purchase need assessments and prioritizing reusable logistics assets, reducing excess spend by 20%.
 - Maximized use of digital vouchers and platform-based discounts for logistics purchases, cutting procurement costs by up to 30% without compromising quality.
 - Led end-to-end logistics and preparation for large-scale food distribution, enabling the team to cook and deliver 300+ manually prepared meals for both the general public and people in need.

Certifications

- Cisco (Jun. 2025): Networking Basics.
- Cisco (Sep. 2025): Introduction To Cybersecurity.

Technical Skills

Programming Languages: C/C++ (proficient), Java, Python, SQL, HTML/CSS, Go, C#
Networking: Cisco Packet Tracer, Topology Design, IP Management (Static & DHCP), Network Debugging
Infrastructure & DevOps: Linux System Administration (Systemd, Task Automation), Microsoft Azure, Docker, Kubernetes, VMware, Git
Network Scanning & Vulnerability Awareness: Nmap, Vulnerability Analysis, Web Exploitation (SQLi, XSS, Command Injection)
Soft Skills: Effective Communication, Adaptability, Technical Writing & Documentation, Team Collaboration

Languages

Indonesian (Native)

English (Fluent)
